

PlaS Series keypads from EECO combine a plastic keycap with an elastomer switch, allowing a wide range of design options while minimizing tooling costs.

EECO's PlaS Series keypads are the perfect solution for applications requiring many optional configurations based on a common keypad design. Change language, product options and features by simply printing different legends on the keycaps. Reduce tooling costs and inventory while increasing design flexibility with EECO's the PlaS Series keypad.

- **PlaS SERIES** – Using an advanced adhesive, the PlaS Series combines the durability of a molded plastic keycap with the functions of a rubber keypad.

- Unlimited key shapes available
- Any plastic material may be used for keys
- Graphics printed on first or second surface
- Reduces assembly and handling costs
- Excellent bond between plastic and rubber
- Ideal for products with legends in multiple languages
- Loose keycaps reduce inventory levels and increase manufacturing flexibility
- Bonded keycaps aid in assembly processing
